DESCRIPTORS: *Astronomy, *Solar flares, *Solar
disturbances, Solar corona, Solar spectrum,
Astronomical observatories, Sun.

An attempt was made to classify chromospheric flares
on the basis of their relationship with prominences.
Observations were made, during the period of 1958-1960,
using a chromospheric telescope, a spectroheliograph,
and a microphotometer. The most effective method of
studying the dynamics of flares was found to be with
motion-picture photography. The observations show

Trans. of Vysokomolekulyarnyye Soyedinyeniya (USSR)
1959, v. 1, no. 2, p. 240-243.

A study was made of the mechanical properties of
polyhexamethylene adipamide over a wide range of
temperatures. Anomalies were found in the tempera-
ture dependence of the deformability and recrystalli-
zation stress in the interval 180 - 190°C. The anom-
alies are associated with the kinetics of crystalliza-
tion and recrystallization of the polymer. (Author)

DESCRIPTORS: *Electrons, Crystal structure,
*Polymerization, *Ethylenes, *Phthalates, Isomeric
transitions, Ionization, *Radiation effects, Phenyl
radicals, Radiochemistry.

Polyethyleneterephthalate on irradiation with fast
electrons goes over from the crystalline to the amor-
phous state. This amorphisation is associated with
the isomerization of certain portions of the polymer
(Nuclear Physics and Nuclear Chemistry, TT, v. 8,
no. 6) (over)
